

An ENTIRELY NEW Battery Receiving Set ~ ~ ~ Newest Type **CROSLEY POWER SPEAKER** ~ 25% LESS Battery Drain ~ MORE Power ~ SCREEN GRID Tubes ~ NEUTRODYNE Circuit ~ these mean SUPER-PERFORMANCE for Farms ~ Motor Boats ~ Yachts ~ Cruisers ~ Unwired City Homes ~ Summer Camps, etc.

In these NEW CROSLEY Battery Receiver comes the entire battery equipment, including the storage battery, can be placed in the bottom of the cabinet and properly braced by your dealer. The set can then be taken home though you may live far out in the country. By merely connecting an antenna and ground, the set is immediately ready for operation. Because there are only four battery leads and no "B" batteries, the connections heretofore involved in the hooking up of a battery receiver when it was originally purchased and when replacing "B" batteries have been entirely eliminated.

In addition, Crosley has incorporated in battery radio those features which have made famous the Crosley A. C. all-electric radio—Screen Grid tubes, Neutrodyne circuit, power speaker, and console cabinets of unusual beauty and quality. These battery receivers deliver finer performance than battery radio has ever known.

The cabinets are gems of the designer's art and masterpieces of cabinet-making which will lend dignity and distinction to any room. Only the choicest of fine woods are used. This NEW CROSLEY Battery Receiving Set is by far the simplest to connect and operate that has ever been offered in this type of radio. Its extreme sensitivity and selectivity is obtained from three Screen Grid radio frequency stages using type 22 tubes. This set employs a grid-leak detector and resistance coupled first audio stage employing either type 41-A or 12-A tubes.

The chassis requires one 6-volt "A" battery and four 45-volt "B" batteries. No "C" battery is required. There are only four battery leads to connect—fewer connections than have ever been possible before in a modern battery receiver. Coded battery cable and plug-in type speaker simplify the connection.

The push-pull output stage, requiring two type 12-A tubes, provides volume and utterly distortionless reproduction comparable with fine A. C. electric receivers.

The newest type Crosley power speaker is used in all battery receiving sets. While the power speaker used with the CROSLEY 20-H Battery Receiver has the outside physical appearance of earlier Crosley power speakers, it has many refinements and improvements including a larger cone and other features which make it an outstanding power speaker because of its extreme volume, sensitivity and low battery drain.

A local-distance switch enables users in the immediate vicinity of powerful broadcasting stations to eliminate interference.

Tone-Tested by the World's  
Leading Musicians

GEORGE GERSHWIN  
who tone-tests Crosley  
Radio Receivers

Much of the beautiful tone of these CROSLEY NEW Battery Models can be attributed to the suggestion and help of such noted artists as Alma Gluck, Edith Mason, Ulfan Zambalati, Jose Mojica, George Gerashwin, and others equally famous. With Crosley sets in their homes, these artists "rate" by comment, advice, and give Crosley engineers the invaluable benefit of their opinions. In this manner the tone quality of Crosley radio is developed and constantly improved to a richness, color and naturalness that mechanical tests alone could never attain. And this beautiful tone is exclusive with Crosley.

Plenty of Battery Space

Rear View of  
The Battery CRONY

The rear view of The CROSLEY Battery CRONY, shown to the left, illustrates all batteries in place in the cabinet. Sufficient space is provided for them so that crowding is unnecessary and all batteries are quickly and easily accessible at all times. The FOUR battery connections and absence of a "C" battery are shown.

Batteries Can be Placed in  
Closet or Cellar

The diagram to the left shows how the CROSLEY 20-H can be placed in almost any position desired in a room on the ground floor of your home having the cable connecting the batteries running through the floor and attached to the batteries placed upon a shelf in the cellar. The diagram to the right illustrates another suitable arrangement—the battery cable running through the wall just above the baseboard and into an adjacent closet in which the batteries are placed upon the floor, a shelf or table. Either of these arrangements are readily and easily effected with the CROSLEY 20-H.

For Water-Craft

At the left is shown an illustration of the installation of a CROSLEY Screen Grid Neutrodyne Battery Receiver and power speaker in one of the newest and smartest of water-craft—the Chris-Craft Yacht, Model 123, for 1936, costing \$55,000. This manufacturer is only one of many nationally known makers of speed boats, cruisers and yachts who have adopted the CROSLEY Screen Grid Neutrodyne Battery Receiver as standard equipment in water-craft.

Receivers

# The NEW Crosley Battery Radio

## SCREEN GRID ~ NEUTRODYNE ~ POWER SPEAKER

Only **FOUR** Connections to Make  
No "C" Batteries

The eliminating of "C" batteries and the self-biasing of tubes in the NEW CROSLLEY Battery Receiver do away with the necessity of changing the "C" battery connections in order to maintain quality as the "B" batteries run down. This astonishing new development of the Crosley laboratories materially lengthens the life of the "B" batteries and delivers a far better average quality of reception.

The  
**CROSLLEY 26-H**

Screen Grid tubes, Neutrodyne circuit, plus the latest improvements in radios, are yours in this table model set. CROSLLEY 26-H gives finer performance than has ever been known in battery radio. Four to seven times more amplification per stage has been made possible by improved circuit and new tubes. Yet the battery drain is 25 per cent less than on other battery sets operating a power speaker. The set uses three Screen Grid tubes type -22 in the radio frequency stage, two type -12-A or -08-A tubes in the detector and first audio stages, and two type -12-A power tubes in the push-pull audio output stage. This model comes in a metal case finished in a rich brown cracked effect high-lighted in a brilliant yellow gold color. The dimensions are: Only 46 1/2" high, 15 1/2" wide, 10 1/2" deep. Batteries recommended: 6V., 80-120 amp. **\$45.00** less Tubes and Batteries

Newest type Crosley power speaker in a metal case to match the receiving set. **\$14.00**

The Battery  
**CRONY**

The same NEW CROSLLEY Screen Grid, Neutrodyne battery chassis is used in the CROSLLEY Battery CRONY as in the battery-operated CROSLLEY 26-H. The newest type Crosley power speaker is used.

This distinguished console model is made of fine, matched woods. There is an arched center panel of high-lighted maple, with a recessed dial panel of hony walnut finish on the chassis. The eucalyptus plate is in antique bronze effect. The dial is illuminated. A recessed speaker grille is provided with a baffle board essential to rich, mellow tone and the grille cloth of shimmering gold fabric blends harmoniously with the tone of the woods. There are two side panels of Australian Laurel cut with a diagonal grain. These are spaced across the front by slender, fluted moldings, producing a sense of exquisite grace and balance. The corner posts are beautifully turned, beveled and chamfered. The top and side panels of the console are of satiny, two-tone walnut veneer. There is ample space in the cabinet for all necessary batteries, making the CROSLLEY CRONY completely self-contained. Dimensions: Only 42 1/2" high, 27" wide, 14 1/2" deep. The CROSLLEY Battery CRONY is offered at the startlingly low price of only **\$84.50** less Tubes & Batteries

You're **THERE** with a Crosley

The Battery  
**PARTNER**

This handsome cabinet model after the French manner is built according to the most rigid standards of furniture craftsmanship. Double doors of diamond matched panels open to disclose the instrument panel as well as the speaker grille. The gracefully turned legs rise to the full length of the console and carry at the top a delicate bit of carving.

As the CROSLLEY PARTNER, this cabinet of two-tone walnut veneer incorporates the same NEW CROSLLEY Screen Grid Neutrodyne Battery chassis as used in the CROSLLEY 26-H. The newest type Crosley power speaker is built into the console. This most satisfying and pleasing of all battery receivers is offered at an astonishingly low price. Ample space in the cabinet is provided for all batteries. Dimensions: Only 40" high, 28 3/4" wide, 16 1/2" deep. **\$88.50** less Tubes & Batteries
